

Install the SketchUp plugin

BPO's full configurator opens right inside SketchUp: configure your objects at real dimensions and they land in the model as native components, textures included.

REQUIREMENTS

- SketchUp Pro 2021 or newer, on Windows.
- A BPO account with an active subscription.
- An internet connection (the configurator runs online).

FIVE-STEP INSTALLATION

- 01 Download the file** — BPO-SketchUp-v1.15.rbz from your My account page on bpoobjects.github.io/BPO.
- 02 Open the Extension Manager** — in SketchUp: Window menu → Extension Manager.
- 03 Install the extension** — click "Install Extension", select the downloaded .rbz file, confirm.
- 04 Restart SketchUp** — the BPO toolbar appears. If not: View → Toolbars → check BPO.
- 05 Launch the configurator** — click the BPO button in the palette, configure your object, then "→ SketchUp": it lands as a native component.

The plugin is included in the subscription.

Downloads and updates from your My account page — same installation procedure for each new version.

TROUBLESHOOTING

- Toolbar missing: View → Toolbars → check "BPO".
- Extension blocked: Window → Preferences → Extensions, relax the loading policy while you install.
- Installed version: shown in the Extension Manager, "BPO" row.
